

Mavenir Powers 3 Billion Converged Messages Per Day

*Converged Messaging Solutions Enable
Rapid, Cost-Effective Rollout of Services Across Any Generation Networks*

RI CHARDSON, TEXAS and Barcelona, Spain, February 15, 2009 — Mavenir Systems announced today at GSMA World Congress (Booth # 1A55) that its converged messaging solutions are deployed by four mobile operators in Asia, Europe and North America, with capacity in excess of 3 billion messages per day. The milestone highlights how operators worldwide are turning to Mavenir to optimize SMS traffic growth and launch new services based on the GSMA's Rich Communications Suite.

Mavenir's suite of Converged Messaging solutions features an IP-based, layered architecture that replaces legacy SMSCs and MMSCs, providing immediate, fivefold cost savings, expanding capacity and enabling innovative, revenue-generating services. Based on the Mavenir ATCA-compliant mOne™ Convergence Platform, it also gives operators a fast, cost-effective way to deploy RCS, Premium Messaging, Instant Messaging and Interworking services across 2G, 3G and LTE networks and devices.

"The success of these four operators showcases the power of using a single multi-services platform – mOne – as the foundation for both their existing and new LTE/4G access networks," said Payam Maveddat, Vice President of Product Management and Partnerships, Mavenir. "Mavenir's Converged Messaging solutions enable advanced, market-differentiating services over SMS and MMS that can target an operator's entire customer base immediately."
