

**Mavenir Job Description – Technical Project Manager**  
**Location: Dallas, Texas**

The Technical Project Manager will be involved in IOT activities as well as customer demo activities interacting with the operations team.

**Responsibilities:**

- Work with external vendors for IOT of Mavenir products.
- Project management of Mavenir development projects.
- Work directly with customer Engineering and Management teams in the deployment of core network solutions.
- Validate timelines with customer and Mavenir R&D/Operations teams, putting together detailed project plans. Identify and coordinate Mavenir Operations resources in the installation of lab and production systems, to include integration and acceptance tests.
- Drive and capture Production launch metrics, ensure installation teams are in-place and actively engaged with local resources.
- Provide regular senior management-level reports to both customer and Mavenir executive teams.
- Identify and escalate critical path items should they become delayed, suggesting possible mitigation paths as appropriate.
- Work with development, system test and operations engineers in multiple time zones around the world.

**Requirements:**

- BSEE or equivalent experience with 5-8 years managing wireless core network application testing and deployment.
- 3-5 years working with Microsoft Project/Powerpoint. PMP certification, as well as high-level knowledge of IP/SIP/SS7/DTAP/MAP/ISUP/GSM/CDMA/HTTP protocols preferred.
- 2 years of working experience in IMS network.
- Excellent verbal and written communications skills.
