

NEWS RELEASE

MAVENIR SYSTEMS SELECTS RADISYS' AWARD-WINNING ATCA AND MEDIA SERVER PLATFORMS TO DEPLOY MOBILE CLOUD SERVICES FOR 3G/4G/LTE NETWORKS

Mavenir Systems joins RadiSys Alliance Partner Program (RAPP)

HILLSBORO, ORE.—February 8, 2011—RadiSys® Corporation (NASDAQ: RSYS), a leading provider of innovative hardware and software platforms for next generation IP-based wireless, wireline and video networks, and **Mavenir Systems**, a premier provider of mobile convergence solutions, today announced a partnership, as part of the **RadiSys Alliance Partner Program** (RAPP), to deliver an integrated 3G/4G/LTE mobile services platform. The Mavenir mOne Convergence Platform provides mobile operators with the next-generation communications services demanded by their subscribers, along with the economics, scalability and flexibility required by the rapidly changing dynamics of the mobile market. With the emergence of cloud services being offered by many traditional service providers, the integrated solution from Mavenir and RadiSys allows mobile operators to enhance their existing networks with new, revenue-generating applications and lower the cost of legacy services.

Mavenir selected RadiSys **AdvancedTCA (ATCA)** and **Media Server** platforms to increase service development and deployment on carrier grade platforms already accepted by Tier 1 and Tier 2 mobile operators globally. Using RadiSys' platforms, Mavenir is able to deploy systems with a high degree of scalability and maintain aggressive performance curves set by the major silicon suppliers without having to spend large amounts of R&D dollars.

"RadiSys is pleased to partner with Mavenir to provide mobile operators with the next-generation communications services demanded by their subscribers, along with the economics, scalability and flexibility required by the rapidly changing dynamics of the mobile market," said Anthony Ambrose, vice president and general manager, RadiSys. "We continue to expand our diverse RAPP ecosystem with solution partners, such as Mavenir, to provide our customers with a wide range of complete solutions, minimizing their resource requirements and maximizing their returns."

Mavenir is addressing the mobile operator's need to transition mobile voice and messaging services from a traditional SS7-based silo network to an all IP-based core network (mobile cloud services). Mavenir converged voice, video and messaging solutions, delivered on the mOne platform, focus on launching critical and innovative services – including voice over LTE, rich communications suite, IP messaging, mobile video calling and conferencing – for mobile operators using technology enablers that can be seamlessly integrated into existing network environments. The rich set of mobile cloud services, bundled with mobility and service adaptation, provide users the freedom to communicate over various access domains and devices whenever they choose.

"As Mavenir continuously expands its portfolio of cloud offerings for its growing base of top-tier mobile operators, we needed to work with an industry-leading integrated solutions and platform provider that could meet our aggressive time-to-market goals," said Shubh Agarwal, vice president of marketing, Mavenir Systems. "By partnering with RadiSys, we can provide our customers with best-in-class solutions while minimizing our resource requirements and maximizing our returns."

About the RadiSys Alliance Partner Program

The **RadiSys Alliance Partner Program** provides service providers with pre-integrated, revenue-generating services solutions and original equipment manufacturer customers with the broadest portfolio of standards-based building blocks in the industry. These solutions deliver choice and flexibility while significantly reducing development risk, time-to-market and cost. The breadth and depth of the RadiSys ecosystem results in solutions that not only address the underlying technological needs associated with migration to next-generation platforms, but also address the business and service model requirements between partners delivering a comprehensive solution. Participants in RAPP include providers of solutions, application-specific stacks, silicon, hardware building blocks, operating systems and middleware as well as channel distributors and pre-sale and after-sale service providers.

About Mavenir

Mavenir provides the Converged Voice, Video and Messaging Solutions that power Mobile Cloud Services. With Mavenir, mobile operators can offer mobile cloud services that are scalable, highly customizable and easy to implement. Mavenir's Converged solutions, based on globally accepted IMS standards, enable the creation of mobile cloud services delivering next generation communication in the mobile operator cloud. Converged Voice solutions enable rapid delivery of Mobile VoIP, Vo LTE, Mobile Video, Session Mobility and Femto services. Converged Video solutions provide Mobile Video Conferencing and mashups with traditional services such as single voice and video mail. Converged Messaging solutions deliver SMS, Multimedia and RCS services to monetize 3G and 4G services. Our innovations, implemented on the all IP, Mavenir mOne Convergence Platform, deliver services to any device by bridging core network and broadband access generations. Headquartered in Richardson, Texas, Mavenir has facilities in India, China and Europe. www.mavenir.com

About RadiSys

RadiSys (NASDAQ: RSYS) is a leading provider of innovative hardware and software platforms for next generation IP-based wireless, wireline and video networks. RadiSys products include its market-leading ATCA and IP Media Server platforms as well as application software for new IP-based communications services. These products enable customers to bring more new high-value applications and services to market faster with a lower investment. RadiSys products are used in a wide variety of applications including 3G/4G/LTE wireless voice, data and video, Femtocell, VoIP and Video over IP communications and conferencing, Voice Quality Enhancement (VQE) and secure defense communications.
